

Why a Front-end to PeopleSoft® Time and Labor?

data collection and integration

Many organizations require an automated time recording solution without sole reliance on manual data entry by time administrators and employees. A front-end data collection solution maximizes the benefits of PeopleSoft Time and Labor with bi-directional integration to time collection technologies.

Data collected through a diverse range of data collection technologies and time clocks is made available for real-time viewing in PeopleSoft Time and Labor. A front-end data collection solution for PeopleSoft Time and Labor ensures that the data passed across your enterprise is accurate and timely. Precise workforce data in your business systems will streamline business processes and facilitate the accurate calculation of payroll.

Benefits of a Time Collection Solution for PeopleSoft Time and Labor

Beyond the benefits you are already realizing from PeopleSoft Time and Labor, a front-end data collection solution offers extended benefits to maximize your PeopleSoft investment.

Alleviates administrative effort and need for manual data entry by automating time collection.

Provides alternative for employees without access to the web or a PC. Employees can enter time at the 'point of activity' via time collection devices or technologies. There are time collection technologies to meet the needs of even the most rugged or challenging environments.

Reduces training times and streamlines business processes with customizable user interfaces. In addition to user-definable prompting, time collection technologies offer multi-lingual support.

Meets organization needs and budget with diverse interaction technologies including badge-based, biometrics, touch-screen kiosk, mobile/handheld, and telephone/IVR.

Facilitates the accurate calculation of payroll by eliminating problems of error-prone manual data entry

Empowers frontline managers and increases workforce productivity with real-time access to workforce data in PeopleSoft Time and Labor

Streamlines business processes with employee access to personal self-service information. Self-service data is downloaded from PeopleSoft Time and Labor and can be accessed from time collection terminals (i.e. absence balances, time information, schedules, etc.).
